DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claim 1, drawn to a subcombination, classified in class 701, subclass 301.
 - II. Claim 2-16, drawn to a combination, classified in class 701, subclasses 68 and 79.
 - III. Claims 17-29, drawn to a subcombination, classified in class 340, subclass 901.
 - IV. Claims 30-36, drawn to a combination, classified in class 701, subclass 96.

2. Inventions I/II and IV/III are related as process and apparatus for its practice.

The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process as claimed can be practiced by another different apparatus such as a vehicle system including speed change control for preventing a possible collision with a target object (or vehicle).

3. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the

Art Unit: 3663

particulars of the subcombination as claimed, for example, the primary vehicle's operator is alert when the pattern corresponds to a predetermined pattern indicative of a particular driving maneuver.

The subcombination has separate utility by itself. For example, the subcombination is not included the step of determining one or more parameters about the state of the movement of the closing vehicle.

4. Inventions IV and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because when issuing an alert to an operator of the primary vehicle, the subcombination does not require determining meeting or exceeding the ancillary traffic hazard conditions as now claimed in subcombination.

The subcombination has separate utility by itself. The subcombination directs to traffic alert system with a primary vehicle does not require inputs adapted to receive state information regarding a closing vehicle from a police radar unit as now recited in the combination.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art shown by their different classification, restriction for examination purpose as indicated is proper.

Art Unit: 3663

6. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

7. A telephone call was made to Scott T. Griggs on 10/12/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

8. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
